SUMMARY

Data Analyst with hands-on experience in data cleaning, exploratory data analysis, database design, and dashboard development. Skilled in Python, SQL, Power BI, and Tableau with a track record of building end-to-end analytics pipelines from raw data to business insights. Experienced in data normalization, ETL processes, and translating complex datasets into actionable visualizations.

TECHNICAL SKILLS

Languages: Python, SQL

Libraries: Pandas, NumPy, Matplotlib, Seaborn, Plotly, Scikit-learn

BI Tools: Power BI (DAX), Tableau

Databases: MySQL, PostgreSQL

Core Skills: Data Cleaning, Data Preprocessing, Exploratory Data Analysis (EDA), Data Normalization, ETL Pipeline, Database Design, SQL Queries, Data Visualization, Dashboard Development, Statistical Analysis, Business Intelligence

Other: Excel, FastAPI, Git & GitHub

PROJECTS

NYC 311 Service Request Analysis | Python, MySQL, SQL, Tableau

- Acquired and cleaned 333K+ NYC 311 complaint records using Python and Pandas, handling missing values, duplicate detection, and datetime standardization. Designed a normalized MySQL database (3NF) with 4 relational tables and implemented 5 SQL views to support analytical queries
- Built an interactive Tableau dashboard connected directly to MySQL, revealing Brooklyn as the highest complaint volume borough (102K+ complaints) and Housing Preservation as the top-volume agency. [GitHub](#)

Mental Health in Tech Workplace Analysis | Python, Pandas, Statistical Analysis

- Analyzed OSMI mental health survey data to examine how treatment-seeking behavior and workplace attitudes toward mental health vary by geographic location. Identified strongest predictors of mental health treatment-seeking behavior through statistical analysis of demographic and workplace factors
- Delivered actionable insights on regional attitude gaps and key factors influencing employee willingness to seek treatment. [GitHub](#)

NYC 311 Operations Intelligence Report | Power BI, DAX, Data Modeling

- Developed a 6-page Power BI report analyzing 333K+ service requests across geographic, time-based, and agency performance dimensions. Built custom DAX measures for resolution rate, average resolution time, and running totals to track operational KPIs
- Identified key business insights including peak complaint hours (9-11 AM), Friday as highest-volume day, and agency-level resolution time bottlenecks (up to 338 avg hours). [GitHub](#)

Customer Churn Analysis | Python, Pandas, Scikit-learn, Matplotlib

- Performed exploratory data analysis on customer churn dataset to identify key factors driving customer attrition. Analyzed churn patterns across contract type, tenure, and monthly charges, finding month-to-month customers churn at significantly higher rates than annual contract holders
- Built and evaluated multiple classification models (soft/hard voting ensemble) to validate key churn drivers identified in EDA. Presented findings and actionable business recommendations. [GitHub](#)

Education

COMSATS University Islamabad

BS in Computer Science

September 2023 – June 2027

CGPA: 3.35/4

CERTIFICATIONS

Data Analyst in Python Track (*DataCamp*)

- Covered Python, NumPy, Pandas, data visualization, and exploratory data analysis through structured hands-on exercises and practical datasets.
